Forest Products
Division

February 26, 1985

Mr. Albert W. Wills, P.E., Chief
Division of Environmental Engineering
County of Bucks
Building "K"
Neshaminy Manor Center
Doylestown, PA 18901

Dear Mr. Wills:

Subject: Response to Violation Notice c
Clean Streams Law

Per your letter (certified mail #P-442-68.) dated February 14, 1985,
the following action will be taken on the (2) subjects mentioned
below with a completion date of no later t April 15, 1985, weather
permitting:

Project #1 - Steam Condensate Discharge

Owens-Illinois, Bristol has ordered material as of February 25, 1985. When
the material arrives work will begin to tie the condensate line into the
boiler blow down lines which go into a holding tank.

Project #2 - Dumpster Retention Area

Work had previously started in late November 1984 to excavate an area to
pour a concrete pad and construct retention walls to keep any spillage
from the dumpster getting into the storm drain. This project will continue
as soon as weather permits. All shift supervisors have been notified to
police the dumpster area and instruct personnel in what material is
allowed to be placed in the dumpster.

We will be working diligently on these projects over the next seven (7)
weeks to complete the projects and keep any potential discharge from enter-
ing the storm drain area. If you have any questions regarding the above
aforementioned projects, please call or write at your convenience.

Sincerely,

Steve

Steve Zenzel
Plant Engineer
